

VOLUNTEERS NEEDED FOR HYBRID RESEARCH STUDY

Co-production of a Multi-Staged Digital Cognitive Screening Tool

Ethics Approval Reference: MS IDREC 587077

We have developed the skeleton of an app that aims to test for difficulties in mental abilities suitable for the full range of stroke survivors. We need your help to design this app to make it most accurate and appropriate for stroke survivors. We are hosting in-person hybrid workshops with experts to help build the app and the report outputs from the app about participant performance.

We are looking to recruit allied **healthcare professionals** including:

- Neuropsychologists
- Psychologists
- Speech and language therapists
- Occupational therapists

Eligibility:

- 18yrs of age and over
- Fluent in English
- Working in the UK
- At least 1 year of experience in cognitive assessment in stroke

You are invited to participate in a hybrid study which takes place across one to two workshops (of around 2.5hrs each), and up to three rounds of a Delphi survey (each survey up to 45 minutes). The workshops would ideally be **in person**, but we can accommodate videoconferencing via MS Teams.

The workshops will involve activities to brainstorm what tests to include in a new app, as well as the design of the app, and crucially the report that is the outcome of the app. There would be a report for stroke survivors and a report for healthcare professionals.

The session will take place in the Nuffield Department of Clinical Neurosciences at the John Radcliffe Hospital, Oxford.

We will reimburse your time at the workshops at **£15ph** and we will provide catering.
